

ACUTE CARE

Hospitals and rehabilitation - Repositioning and Transferring People Safely

ONLINE COURSE

LEARNING OBJECTIVES

- Identify the appropriate equipment, correct technique and number of carers required to position patients safely
- Identify the O'Shea criteria used to assess a person's ability to assist with on and off bed tasks

COURSE OVERVIEW

The course provides an online comprehensive learning and assessment experience for your clinical staff in safe patient handling.

It covers all common tasks required to reposition, transfer and mobilise patients in the acute care setting. It includes the use of contemporary equipment such as slide sheets, hoists, hover jack and mats and other devices.

The course is divided into five learning modules and includes a case study, step by step description and a short vignette of each task and a quiz to test knowledge.

The assessment consists of 20 randomised questions. Participants need 80% to pass with 3 attempts.

BENEFITS

- **Standardises practices; improves care, reduces risk**
- **Recognised course - used by government, and national private hospitals, universities**
- **Industry accredited - CDP points**

DELIVERING EXPERT EDUCATION

- Flexible and affordable
- Staff/students learn at their own pace
- Contemporary safe practice - developed by experts
- Complies with health and safety legislation and other standards
